University of North Carolina at Chapel Hill - Spring 2020

GEOG 215: Introduction to Spatial Data Science

📄 Number of posts: 7 | 👤 Number of students enrolled: 3

Syllabus 📄

Course Information

Staff

Resources

Description

This course will introduce students to data science with a focus on spatial (geographic) data, which are data that are referenced to a particular location on Earth's surface. Students will learn concepts, techniques, and tools they need to apply various facets of data science practice, including data collection, management, and integration, descriptive modeling, exploratory spatial data analysis, and effective communication via data visualization and mapping. Real world examples and datasets spanning physical, social, and health sciences will be used throughout the course in an effort to promote contextual learning.

General Information

Instructor

Varun Goel
varun@live.unc.edu

Graduate Research Consultant

Kate Brandt
kbrandt@live.unc.edu

Class

MW 3:35 - 4:50 pm
204 Carolina (Hurstor) Hall

Office Hours

TBD

Announcements
